

### **OR/Procedural Protocol for COVID-19 Positive or PUI Patient**

1. If available, a negative-pressure AIIR room is preferred.
2. Make sure anesthesia machine has proper filters attached.
3. All staff in the room don appropriate PPE. Team members check each other for safety.
4. Transport patient directly to OR wearing a mask if not intubated.
  - a. Transport ventilator should include viral filter.
  - b. The humidivent is not a viral filter, but may be used.
5. Plan staffing to minimize personnel turnover during anticipated duration of procedure. Minimize traffic through the door.
6. Apply monitors.
7. Preprocedural assessment occurs in the OR.
8. Intubation, if indicated.
9. Turnover to procedural staff.
10. Surgery/procedure takes place.
11. Make plan for patient disposition.
12. Patient wears surgical mask during transport if not intubated.
13. Staff remove PPE and check each other for safety.
14. Room turnover.
